

Make Your Own Treadle Lathe

DIY Treadle Lathe Hardware Kit

I have selected the following components to give you an idea of what hardware you might purchase to complete your treadle lathe. Of course, coming up with your own alternatives is half the fun and can save you some money. Most of the links are to Amazon.com since most folks will have access to them but certainly feel free to choose other vendors. Even if you do choose to get your parts locally or from another on-line source I think the linked items will give you the general specifications for each part.

By the way, I don't make anything from those links – they are just suggestions of what components my research has shown should work together as explained in the [book](#) and my [on-line updates](#). All of these parts were available and prices current as of November 21, 2021. I hope this list helps you Build Your Own Treadle Lathe!

Steve

Main Shaft & Flywheel/Crank Shaft

A36 Steel Round Rod, Unpolished (Mill) Finish, Hot Rolled, ASTM A36, 0.625" Diameter, 36" Length
<https://www.amazon.com/dp/B000H9NXOO> \$9.28
